Dr. Wei-Hung Pan

Engineering and Analysis for clinical research — data infrastructure and statistics

Email: [TO BE SUPPLIED: contact email address for this site] · Telephone: [TO BE SUPPLIED: telephone number reachable during business hours]

Profile

I have worked with health and clinical data since 2012, and I both build the data infrastructure a study runs on — clinical data pipelines, reproducible analysis setups, apps and dashboards, registry and cohort databases — and run the statistics on it. The combination is the part that is hard to find: a statistician or a developer is available in any university department, one person who will build the data layer and defend the methods that come out of it is not. I teach statistics, machine learning and AI to research teams and companies in Taiwan and Germany, in Mandarin, English or German.

Experience

2012 – [TO BE SUPPLIED: year the doctoral work at NHRI ended] National Health Research Institutes (NHRI)
Doctoral research in bioinformatics, and the PhD itself: health and clinical data from 2012 onwards.

2022 – present University of Europe for Applied Sciences
Adjunct Lecturer in Mathematics & Statistics; teaching at German universities since 2022.

[TO BE SUPPLIED: year the current post in early-phase drug development began] – present [TO BE SUPPLIED: current employer's name, as it should appear in public]
Data science and statistics in pharmaceutical early-phase drug development.

Education

PhD in Bioinformatics
Doctoral research from 2012 at the National Health Research Institutes (NHRI), Taiwan, on health and clinical data.

Publications

2020 Cellular and Molecular Gastroenterology and Hepatology

[TO BE SUPPLIED: article title, authors and DOI for the 2020 Cellular and Molecular Gastroenterology and Hepatology paper]

2019 Gastroenterology

[TO BE SUPPLIED: article title, authors and DOI for the 2019 Gastroenterology paper]

2018 Genome Medicine

[TO BE SUPPLIED: article title, authors and DOI for the 2018 Genome Medicine paper]

Awards

2023 Top 25 of approximately 400 lecturers

Berliner Hochschule für Technik. Student teaching evaluation across the university's lecturers.

2019 Best AI Use Case

Esri User Conference. Deep learning for predictive road-quality maintenance, on the German A70 motorway.

Teaching

University of Europe for Applied Sciences — Adjunct Lecturer in Mathematics & Statistics

Teaching at German universities since 2022.

Berliner Hochschule für Technik — Lecturer

Statistics, machine learning and AI, delivered to university cohorts and to company teams, in Mandarin, English or German.

What I deliver

Engineering

A clinical data pipeline; a reproducible analysis setup; an app or a dashboard; a registry or cohort database.

Analysis

Study design, analysis, publication statistics, reviewer response, and coaching a researcher to run and defend their own analysis.

Languages

Mandarin Chinese · English · German
